```
WHAT TO DO:
1. Open the main app entry point (app.py or main.py) and inspect the existing
   FastAPI setup.
2. Add this import near the top:
   from legal_filing_module import filing_router
3. Add this after the FastAPI app instance:
   app.include_router(filing_router)
4. Mount the module's static files:
   app.mount("/legal-filing-static",
       StaticFiles(directory="legal_filing_module/static"),
       name="legal-filing-static")
5. Ensure data/legal_filing/ directory exists (mkdir if needed).
6. Install missing deps: pip install python-multipart jinja2 aiofiles
7. Check that all 5 HTML templates in legal_filing_module/templates/ reference
   static files at /legal-filing-static/ — if not, update them.
8. Verify collaboration.py route references (create_share, list_active_shares,
   revoke_share, get_activity_feed) exist in export_service.py — add stubs if
   missing.
9. Run the server and verify: /filing/ shows the dashboard,
   /api/filing/cases/ returns 5 cases.

FRAMEWORK: FastAPI with Pydantic v2, Jinja2 templates, JSON file storage
ROLE-BASED VIEWS: Advocate (full access), Tenant (own data, multilingual),
    Housing Manager (anonymized read-only)
API PREFIX: /api/filing/
GUI PREFIX: /filing/
```

---

## Appendix: Dependencies

| Package | Required For | Install Status |
|---|---|---|
| `fastapi` | Application framework | Should be installed |
| `uvicorn` | ASGI server | Should be installed |
| `pydantic>=2.0` | Data models (v2 syntax required) | Should be installed |
| `python-multipart` | File uploads | May need to install |
| `jinja2` | HTML templates | May need to install |
| `aiofiles` | Async file operations | May need to install |
| `openpyxl` | Extraction script only (not runtime) | Only for Phase 1 |
